

How To Bring Solar Home

Step 1

Complete our online form at BringSolarHome.com to get started. This site will collect information on the types of solar you are interested in, your current energy usage, and other details to help us determine if you are a good candidate for solar.

Step 2

If you are a good fit for solar, your information is given to three participating solar companies who will contact you with a week. You will receive a bid from each company and have an opportunity to have any questions answered before making a decision. The solar installer will also provide you with information on CPS Energy rebates, Federal Tax Credits, and available solar lending options.

Step 3

After a solar contract is signed, Solar San Antonio will stay in touch you to make sure you have a good experience. We will also stay in touch with the solar installer to make sure the entire process is going smoothly.

Step 4

Enjoy your solar home!

An initiative of **Solar San Antonio** to help homeowners "go solar."

Bring Solar Home is an initiative of **Solar San Antonio** to encourage local solar commitments and educate the community on the benefits of solar energy. We are working with CPS Energy, solar installers, and financial institutions to simplify the process of "going solar." By bridging the gap between consumers and industry professionals, we are increasing the number of solar installations in San Antonio.

Bring Solar Home's services are structured in three program areas:

Community Education – which explains how solar energy works, benefits the environment, and reduces your monthly utility bill by utilizing current incentives. If you would like us to present information at your home owner's association meeting, office, church, or community group, please let us know by calling 210-22-SOLAR.

Industry Development – which unites qualified solar installers participating in Bring Solar Home with interested residential projects. Once a solar installation project is initiated, our office will monitor the project through completion to ensure your satisfaction.

Financial Institution Development – which works to coordinate lending services from financial institutions to solar installation projects. Our office has worked with Wells Fargo, N.A. and San Antonio Credit Union to facilitate San Antonio's first solar loan programs. With these options, solar energy is now affordable for homeowners. For more information, please call us at 210-22-SOLAR.

Each project initiated by Bring Solar Home is monitored for quality assurance each step of the way. Whether you have questions on solar energy, finding a local installer, or financing a solar installation, we are here to help.
